

AGILE AND DELICATE LIKE A DRAGONFLY

Unique and with the lightness of the dragonfly – this is how the m06 inclined conveyor »ITV« works, quickly and safely overcoming any height difference. The inclined conveyor transports flight baggage directly to the passenger boarding bridge, meaning it can be used in direct proximity to the aircraft. Baggage or similar general cargo is either safely lifted onto the aircraft or lowered onto the apron. Staff must no longer carry the baggage up and down the sometimes wet or icy stairs in any weather.

PRODUCT FEATURES

- Ultra-simple adjustment to required installation conditions
- Low-maintenance lifting system with double chain drive
- »EIS system«: rapid assembly due to simple modular system, perfectly optimised for transportation
- Energy-efficient and economic design

FIELDS OF USE

Airport Solutions:

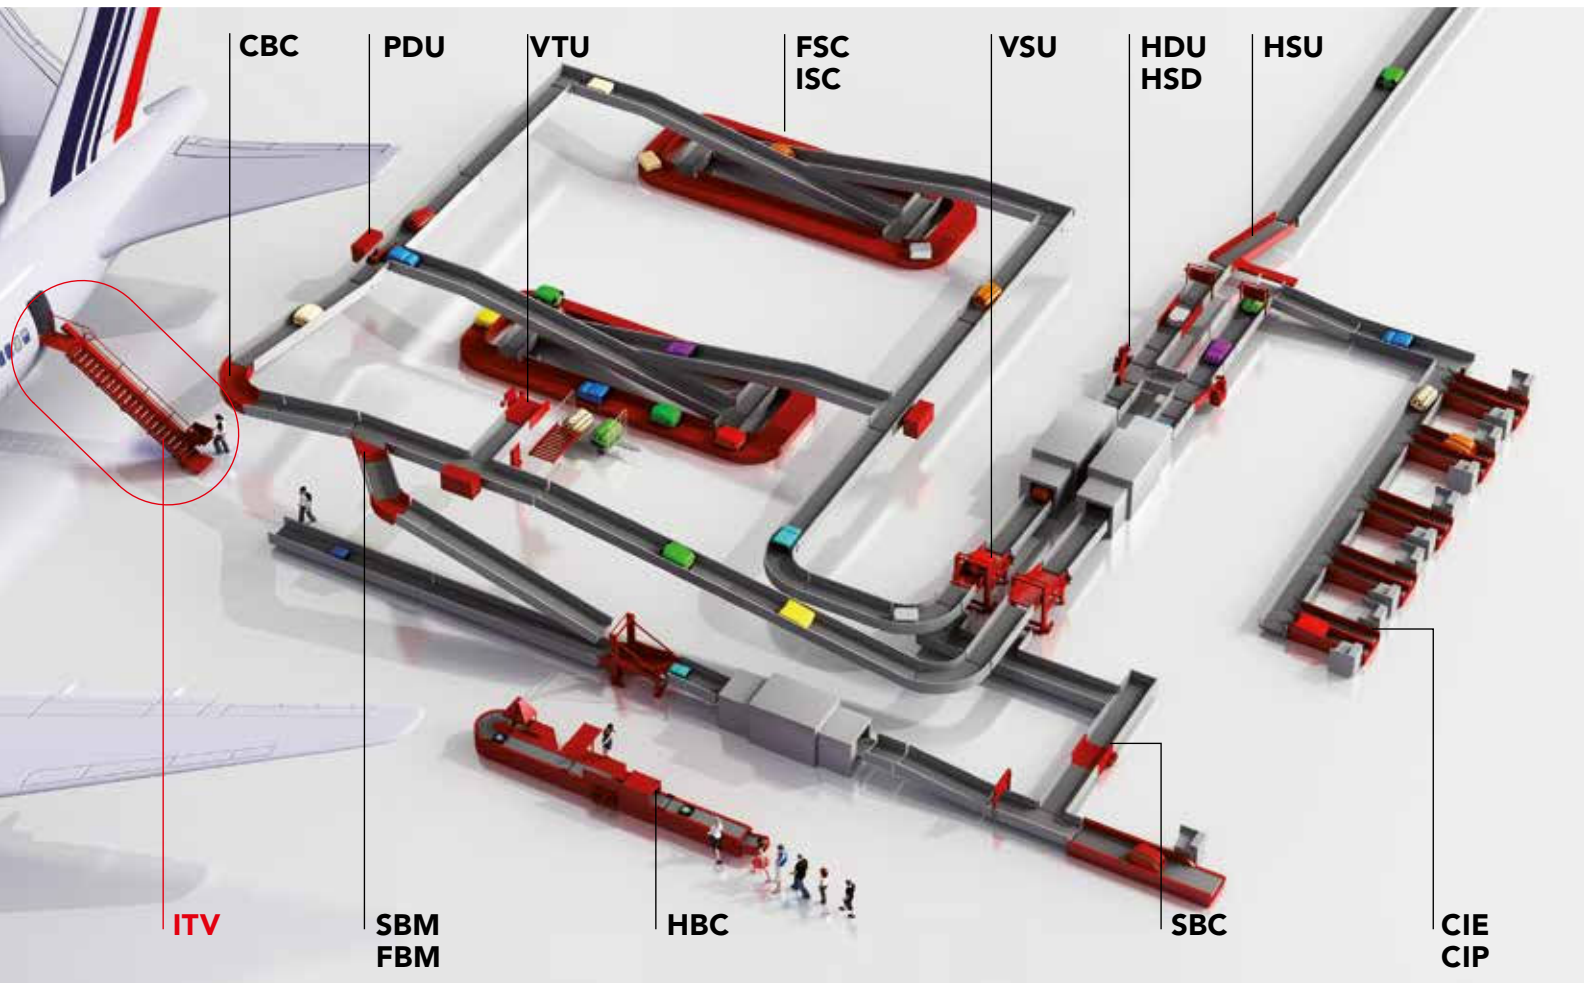

- On service stairs for passenger boarding bridges

TECHNICAL DATA

Speed of conveyor	approx. 0.3 m/s
Conveyor length	up to 7,000 mm
Conveyor height	up to 6,000 mm
Baggage weight	up to 50 kg

USED WORLDWIDE

FULL SERVICE BY MOTION06

motion06 develops, builds and installs the most intelligent conveyor systems for airports, intralogistics and industry. The foundations of our company are the highest quality standards, individual concepts and complete solutions, together with continual further development. Every one of our products stands for well thought-out, sophisticated technology, precision and intelligent simplicity. We consider project safety and speed in the implementation to be par for the course. Worldwide.
